

COMPRESSOR FOR POWER-SAVING AND EXTENDING LIFESPAN THEREOF

Publication No. : CN2119517U

Publication Date: 10.21. 1992

Disclosed is a compressor for power-saving and extending a lifespan thereof. The compressor is provided with a heat-emitting flange at an outer case thereof. If the heat is effectively emitted, a thermal endurance characteristic of an insulating material of a motor can be lowered and a combustible probability of the compressor can be remarkably lowered. Also, the operation time duration of the compressor is relatively shortened. Accordingly, the life span of the compressor can be extended, and the excellent power-saving effect can be obtained.
